Letter of Intent

STANDARDFLEX

This letter is to express the interest of my organisation, Wiener Netze GmbH, to support the proposal

STANDARDFLEX - A novel energy management system and flexibility market centric smart grid architecture that standardizes and vertically optimizes flexibility exploitation through digital, intelligent, and integrated energy services

which will be submitted under the HORIZON-CL5-2022-D3-01-12: Replicable solutions for a cross sector compliant energy ecosystem

The project STANDARDFLEX develops a novel energy management system and flexibility market centric smart grid architecture that standardizes and vertically optimizes flexibility exploitation through digital, intelligent, and integrated energy services, which will be submitted under the specific call HORIZON-CL5-2022-D3-01-12: Replicable solutions for a cross sector compliant energy ecosystem of the Horizon Europe framework programme.

I, DI Thomas Maderbacher, representative of Wiener Netze GmbH, hereby declare that I am highly interested in the contents and results of the "STANDARDFLEX" project and that our institution is willing to support this project. We are convinced that STANDARDFLEX will have a significant impact on the provision of flexibility at the Austrian markets.

During the time of the project, we will be in regular communication with the STANDARDFLEX consortium to provide requirements and plans of Distribution System Operators Wiener Netze GmbH towards the use of aggregated flexibility. We will provide the necessary data for the performed grid simulations, and we will participate in the relevant meetings to discuss the assumptions and results.

We are looking forward to interacting with STANDARDFLEX to exploit its proposed services and to use the results to enhance the flexibility utilisation in the distribution grid.

Yours sincerely,
DI Thomas Maderbacher
CEO
